Given two integers A and B, you must print the lowest integer greater than or equal to A divided by B.

Input :

The input starts with an integer **T**, the number of test cases. For each case following two integers **A** ($-1000 < \mathbf{A} < 1000$) and **B** ($-1000 < \mathbf{B} < 1000$, $\mathbf{B} \neq 0$) in the same line.

Output:

For each test case you must print a line with the lowest integer greater than or equal to A divided by B.

Input	Output
5	1
1 2	4
10 3	50
99 2	2
4 2	-1
-3 2
